

Angelus Britannicus?

A N

EPHEMERIS

For the Year of our Redemption, 1699.

Being the 3d. after the *Bissextile* or Leap-year.

Since	The Creation of the World,	56487	Yea.
	The Death of our Saviour,	1666	
	The Conquest of this Nation,	693	
	The Restoration of K. Char. II.	39	
	The Last great Plague,	34	
	The Burning of London,	33	
	The Last great Frost	15	
	The Death of K. Charles II.	14	
	The Abdication of K. James II.	10	

Amplified with Observations

From the Suns Ingress into the Equinoctial Sign *Aries*, and the other Cardinal Points; with an account of the Eclipses, Conjunctions of the Planets, and other Configurations of the *Cœlestial* Bodies.

Calculated for the Meridian of the Famous City of *London*, where the Pole Artick is elevated above the Horizon 51 degr. 32 min. but may indifferently serve for *ENGLAND, SCOTLAND, and IRELAND.*

By John Tanucci Student in Physick and Astrology.
The Forty Third Impression.

Agunt non Cognat.

Astra in voluntatem hominum, & liberum arbitrium indirecte & per accidens agunt; dum directe temperamentum significant & disponunt, sensusque in consensum trahunt.

London, Printed by W. Horton, for the Company of Stationers, 1699.

Table of the exact time of the moon's coming to the South for every day of the first six months of the Year 1698, serving to find out more exactly the time of high water in most of the eminent Ports in England, Scotland, and other Ports adjacent.

A 4

January hath xxxi days

My third fancy, and my worn out Pen,
Once more doth venture the censorious Stage,
Where judgments pass by various sorts of Men,
Some slightly pass by, others vent their rage;
Their Censures are invalid, for I know
Such will the Dove destroy and spare the Crow.

January 1699.

The Egerick Grantees all in Brutal Sigh,
The lighter sort carest them with their Beams,
To aggravate the Season, all combines;
Hence cold we may expect unto extremes,
But various and oft changing to devious us,
We hope for warmth, but confidence soon leave us.

Lunations and other Observations.

Aspects and Weather.

1 K. Charles II. Crown'd at Schoon, 1650.	☿ ♀ ☽ dark
2 1. Hobham the Son of behead. 1644.	☽ perig. snow

31	☽ Perig. rain.

February hath xxviii days.

Be not too jealous, who can inspire
 Thy flame, bread have worn, with hoary age?
 To tell where shall the flames o'ib' take up fire
 Burst out: Or who it is must feel the rage,
 O'ib' two malevolents, their angry force
 Advise the wife to flee a steady course.

February 1699.

The Month begins with Phaeton's peaceful Beams,
Saturn's dense clouds to expell and clear the Air,
But Mars accosts him, and from his extremis,
Expects a turbulence; yet sometimes fair
Venus puts in her influx which I like
Send snow or rain scarcely to fill the Dyke.

Eclipses and other Observations.

Once and again, bright Jove seeks to appease
Revengeful Saturn and the warlike Star,
Endeavouring to keep the World at ease,
And quench the force and fiery flames of War.
Blest be the Man, and Men who do employ
Their time and parts this Blessing to enjoy.

March 1699.

Month days

Cold winds the Month begins, and freezing Air,
Soon after Phaethon shows his blustering Force,
Clearing the Sky, rendering the weather fair;
But at the change the Planets in their Course,
Do variously Aspekt, the which do send
Variety of weather to the end.

Lunations and other Observations.

Aspects and Weather.

May hath xxxi days.

The warlike Star displays his fiery beams,
Against old Saturn, and then joyns the Sun,
Raise Discords, Rapines, Murthers, such extremes,
Where Wars on foot, such mischiefs will be done:
When Peace is, civil discords doth arise,
House burnings, and notorious Robberies.

June 1660 XXX Days

From Fire and Famine may London be free;
 From locust Plagues, that blow the Fire
 Of Civil Discords: In her row be
 Famous for Victory, let the World admire
 Her Greatness, Government; may none defame
 Her, that with Goodness and Alliance claim.

June 1699.

Month Days.

The Sun and Mars opposeth with their Rays

The greater Fortune; Winds do raise on high,
Thunder and Lightning too, for several days

Saturn and Venus moists and cools the Skie;

Towards the end the nimble Mercury

Sends gentle Gales, and clears it by and by.

B.

July hath xxxi days.

On? mine's Dominion and worldly Power?
 That doth men to their passions so enslave;
 Pageant, not sure to last an hour,
 Be it for life, no longer can be craved.
 If a long life it be, 'twill not amount
 To a moment in Eternity's account.

July 1699.

Month Days.

The Erratick motions seem to promise well,
And gives us hopes of seasonable Weather,
Fit for the Harvest-man; but who can tell
What Sol and Mercury, join'd together
Will effect: we hope 'twill clear the Sky,
And wipe the Tears from weeping Swathins Eye.

Lunations and other Observations in Aspects &c. Weather.

Triet happy he, whom Fortunes flattering smile
Dots not delude: when angry Tempests rise
Is not dismay'd, but can resist her smiles
With an undaunted breast; her frowns despise:
Out-does the proud Heroes of the field,
That ought to him the prize of Fame to yield.

September 1699.

Some fog and mists, and sometimes winds are high,
Sol, Jove, and Mars doe yett such like portend,
About the midst expect a troubled Sky,
Which milder Stars correct. But at the end,
The Inferiours joyne, and oftentimes their powers
Ye find are spent in sudden hasty showers.

October hath xxvi days.

Forbear your Rage, some faults you must endure,
 May you be coolly won to Mercy's side,
 Do not increase the wound you seek to cure;
 But spend your Rage on the Outrage of Pride;
 From Heaven example take; and those that stray,
 Bring back with Love and Peace to the right way.

November hath xxx days.

Savath with gloomy Darknesse hides the Sun,
 And Politicians vail their deep design,
 Whilst People wonder what is to be done:
 May Jove third Sexile mischief countermin.
 No Anger, no Remorse, no Discontent,
 Can seize the man that's truly innocent.

November 1699.

Nor doth be only cloud and dark the Air,
But from thence pourth down great store of Rain,
Lasting for many days, and seldom fair,
Though Jove and Mars would clear the Air again,
But at the end, Saturn and Mercury,
Gives us a Frost, but alter'd by and by.

December hath xxii days

This Year doth end, here ends the Century
 (And may the new one more auspicious be)
 A Year of Action, more of Fealousie;
 And great expectance of strange things to see;
 Cease itching Ears, let meekness ballance rage;
 You'll find that is the way to mend the Age.

Month days.

December 1699

Now Phoebus hath run through the Ecliprick Ring,
 And finished his furthest Southern Race;
 The Fortunes pay him Homage as their King;
 Their mutual Aspects doth the Season grace
 With Weather not unkind, fog, frost and rain,
 And sometimes snow, and quickly clear again.

William 3	1689	1689								Whom God please.

Base Marchioness Slaves from Court be gon,
 A vaunt Dignities Countess from the Throne,
 Dost Execution of our wholesome Law,
 Makes the good Slave and bad Men stand in Awe;
 No need of Beilieu Guards, nor Priest-craft Arts,
 When th' Prince is lodged in the Peoples Hearts.
 'Tis this all Good men wish; for this they pray,
 Till I despise, or see the happy day.

Tarmouth, Dover, Harwich, Callice Road, Bulloign.	10	30
Rye, Winchelsea, Goree, Thames, Rhodes.	11	15

By the help of this Table, and the C's Southing, you may find the time of High Water in any of the Ports specified in this Table, by adding the Hours and Minutes against the Port, to the Hours and Minutes of the C's Southing; the Aggregate or Sum is the Hour and Minute of the time of High Water at that Port, subtracting 12, if your number exceed it. Having so often explained the Use of this Table, I hope it needs no farther Explanation.

When the Sun shines so bright as to cast a Shadow on the Sun-Dial, see where the Shadow falls; count how many Hours and Minutes it wants of 12, and subtract that from the time of her Southing that Night, and the remainder is the Hour of the Night. If the shadow be upon any of the Hours past 12, add it to the time of the C's Southing, and that is the Hour of the Night, subtracting 12, if the number exceed 12. If the Shadow be on the Line of 12, the Hour and Minutes of the Southing is the time of the Night.

I have foretold explained each Page and Column of the Almanack, that I need not do it here again.

Astrological Observations

For the Year, 1699.

A Jove Principium.

Glorious and great, who the rude Lump did move,
The Earth divide from Waves; and plac'd above,
The glorious Lamps of Heaven, and did dispenſe,
Unto them all, Light, Motion, Influence,
To ſerve this Globe of Strife and Turbulence.
Bethou my Pilot: And if my Wind fails,
On thee I'll anchor, thou ſhalt ſtrike my Sails.
In th' ſilleſt Calm, Seamen do often fear,
That foul and boiſterous Weather may be near.
Let the proud ſwelling Waves be ne'er ſo rough,
Be thou my Harbour, and all's ſafe enough.
When the Wind's fair, then I'll hoist up my Sail,
And plow the Deep before a proſperous Gale,
My Voyage ended, Friends to me reſort,
Perhaps they'll bid me welcome to the Port.

We are now arrived at the Year 1699, which puts a Period to the Century, and a Year of famous Expectations, and by them that pretend to underſtand the Scripture Prophecies. This is the Year (ſay they) that answers to the Number of the Beaſt; which is to be accounted, not from the Birth of our Saviour, but from his Paſſion and Death, by which he accompliſhed the great Work of our Redemption. From which they conjecture great Tribulation to the See of Rome, and the Downfall of the Roman Pontificate. This they have conjectured from that Text, that hath hitherto paſſed and befooled the moſt learned, that have undertaken to unfold thoſe abſtruſe and myſterious Prophecies, which ought to be left to God's Wiſdom and his Time to unfold them.

Astrological Observations, 1699.

What may be conjectured from the Motions of the Heavenly Bodies; and the Influences, that may probably from thence befall Mankind in general, or particular Kingdoms and States, this is the Work of the most profound and best skilled Astrologer, warily to lay down his Conjectures of future Accidents. It is true, the Heavens do seem to cast a frowning Ray upon *Italy* and *Rome* itself, as well as upon other Parts of the World. What Effects may follow, I leave to Providence to determine, submitting to the all-guiding Hand of the most high, who orders all according to his good Pleasure. To whom be all Honour and Glory for ever.

Of the Winter Quarter.

It takes its Beginning from the Ingress of the *Sun* into the Tropick of *Capricorn*; which happeneth this Year on *Saturday* the tenth of *December*; at 18 Hours, 10 Minutes, and 8 Seconds after Noon, which (more vulgarly) is on *Sunday* the 11 at 10 Minutes and 8 Seconds after 6 in the Morning, at which Time the Face of Heaven is as follows.

The { Mid-heaven 2 Degrees 44 Minutes of ♋ }
Ascendent 5 Degrees 12 Minutes of ♊ }

All the Planets are under the Earth, the Moon excepted; so they are at the full Moon preventional, except *Jupiter*, just ascended above the Horizon, and the Moon just setting. At the preventional new Moon, they are all above the Earth, and *Saturn*, *Mars*, and *Venus* in Conjunction in the twelfth House, as if Matters lately controverted, and raked up under the Ashes of Obscurity and Secrecy, were suddenly ready to break forth to open View. If the Air be clear, the forementioned Conjunction may please the Eye, but the Influence will be somewhat inauspicious. For this Conjunction of the two Malevolents is in Opposition to the triple Conjunction in 82 and 83. How effectually that Conjunction hath made good its Character, the great Effusion of Blood in *Christendom*, is too pregnant a Testimony, the Wounds scarcely healed, and the Orifices ready to burst out with fresh Blood. Add to this the exhausting the Treasury of most of the Princes of *Europe*; the Devastation of Cities and Towns; the impoverishing of whole Provinces, even

Astrological Observations, 1699.

even to a Depopulation (almost) of many of them. Not to mention the dire Effects that Crowns and Thrones have been sensible of; it being too far above my Contemplation.

It is true, the Effects of that Conjunction draw towards a Period, the Sextile Aspect comes on, and were it not for this rugged Aspect before mentioned, we might hope for a *Quies* till the next Conjunction shows what its Effects will be. (The Conjunction of γ for will happen about the Middle of May, in about 7 Degrees of *Aries*.) If the Benevolence of *Venus* conjoin'd with the two Malevolents, will alleviate their dire Influence it is well. My Reader may remember, that in my last I hinted the great Disturbances that were likely to afflict the more Northern Kingdoms; and if the Clouds of Troubles be blown over there, it is well. I also feared *Jupiter* would suffer a Molestation and Derailment in her Peace and Tranquillity; I wish my Fears may be vain; the Influence of the Heavens seem to threaten them. May the Sextile of the two Superiours, about the Middle of *January* next, and again repeated in *March*, and again in *October*, have a strong and triple Force, to incline the Princes and States of *Europe* to Peace and good Neighbourhood. *Jupiter* is in Trine to the triple Conjunction, strong in his own Dignities, and in Sextile to *Saturn* also in his Dignities. May the good Intercessions of the Person or Persons; Members of Church or State, for Peace, and a slight Understanding; and their Addresses to Kings, Princes, Governors, and Rulers of Nations, for Reconciliation of Breaches, and the tedious Calamities, that rich and poor have groaned under, have a good Effect, and let all that are Lovers of Peace say Amen.

I cannot well omit taking notice of the Conjunction of *Saturn*, *Mars*, and *Venus* about the 21 of *December*; it is an Aspect of a furious and extream Portent as to the Weather, turbulent Winds, violent Frosts oft changing; it hath not the Character of a moist Aspect, but *Venus* with the two Grandes may probably bring Snow, and begin the Year 99 with uncomfortable Weather, and probably some strange Meteor may follow.

Astronomical Observations, 1699.

Of the Spring Quarter.

THis Quarter begins on Friday the 10 of March, at 47 Minutes past 7 in the Morning, the Face of Heaven is as followeth.

All the Planets are above the Earth, but the Moon, and the just setting beneath the west Horizon, the Figure is self followeth.

☉ in γ 000° 00'

Mat.

Matters so long in Debate, and Consults so closely conceal-
ed, now seem to come to a Result, and openly discoursed of.
May the serious Consultations, and the brisk and busy Negoti-
ations now on Foot, have a peaceful Issue, as the second sex-
tile Aspect of the two Superiors seem to promise; at least
the pious Endeavours of a good and well meaning Party to ad-
just Matters so, as to prevent the further Effusion of Christian
Blood. The Aspect it self signifieth the Advancement to Ho-
nour, of some appertaining to the Law, and such as are em-
ployed in Matters of State, and have to do with publick Busi-
ness. The Motion of the Heavens, and their Aspects one to
another, seem to be of a peaceful Tendency: Till May affords
us a quartile Aspect of Saturn and Mars: *Accidit populo anxie-
tates & mala, in parte regum, & ipsi non erunt in obedientis;*
People shall dislike the Proceedings of their Kings or Gover-
nors, and be disobedient unto them. It signifieth also many
and notorious Robberies, more than usual. It often infects
the Air with violent Storms, of Lightning, Thunder, and
Wind. Saturn in Quartile to the Sun, hath somewhat of the
same Indication; *cum in radios solis indicat, aut Martem con-
sentientem, habet totum & fulgurare:* When he falls under
the Rays of the Sun, and Mars consenting, it causeth Thunder
and Lightning. Towards the latter End of May there is also a
Conjunction of the Sun and Mars, Mercury bearing them Com-
pany; the Conjunction it self is of great Force, and the great-
er because Mercury is joyned with them. *Influentia ejus, prae-
cipua in nostro climate, consistit in aptitudine ad producendum vio-
lentas tempestates & pluvias:* Their Influence, especially in our
Climate, signifieth an Inclination to violent Tempest and Rain.
*Si Sol fuerit junctus cum Marte, significat lites & interfectiones
multas in terra Orientis,* when Sol shall be joyned with Mars,
it signifieth Strifes and Contentions, and sometimes Slaughters
in the East. They are conjoynd in the Sign Gemini; under it
is Flanders, Brabant, and several of the Cities therein, Lon-
bardy, &c. and were it a Time of War, we might justly ex-
pect a Battle or Rencontre there, in a Time of Peace, one
Mischiefe or other rising from some violent Actions or Humors.
The City of London is under the Sign aforesaid, God preserve
her from Fire, civil Discord, or some epidemical Distemper:

Astrological Observations, 1699.

or what else may disturb her Peace, or abate her Tranquility. So much for this Quarter.

Of the Summer Quarter.

THis Quarter begins with the Sun's Entrance into the Tropick of Cancer, making our longest Day, and consequently the shortest Night, which happeneth this Year on Sunday the 11 of June, at 16 Minutes past 8 in the Morning, at which Time

The Mid-heaven 16 Degrees 29 Minutes of
The Ascendant 27 Degrees 44 Minutes of

All the Planets are above the Earth, except Jupiter, directly opposed by the Sun, and now in Opposition to Mars. I will shew the Atmospheres that rise from these Aspects, and that mentioned the last Month, may happen among private Persons, and not affect the Publick with Quarrels and Contentions. And I once more pray God to preserve the City of London from Fire and Faction, that is, intestine Quarrels and Divisions among themselves. In the Air the Sun and Jupiter cause Thunder and Hear, unless prevented by the State of Depression, which often produceth a cool Air. The Opposition of Jupiter and Mars, *ad ista omnia generis vicissitudines violentius producit, nequeon & saltem terribile*, In the Summer it produceth violent Changes of all Sorts, also terrible Lightning and Thunder. In August there is an Opposition of the Sun and Saturn, Saturn is in a Winterly Sign, and therefore his natural Coldness is increased, by reason of his great Distance from the Vertex, *distansque sub debili calore circumstantia concurrens cum Sole ad furorem producendum, et fulgur quondam, nonnumquam*, Nevertheless he sometimes concurreth with the Sun, to produce Thunder and Lightning, and such Kind of Weather. What may be said more of the State of the Weather, observe in my Monthly Observations, which tend to that Purpose.

Of the Autumn or Harvest-Quarter.

It beginneth with the Sun's Entrance into Libra, and maketh the second Equinox, the Days and Nights being of an equal Length. It happeneth this Year on Tuesday the 11 of September,

Astrological Observations, 1699.

At 25 Minutes past 10 at Night, the Face of Heaven thus presents. The Mid-heaven 7 Degrees 1 Minute 30 Seconds. The Ascendant 10 Degrees 30 Minutes 30 Seconds.

All the Planets are under the Earth, except Saturn, who is in the ninth House, opposed by Mars in the third. The Sun and Moon are in the fourth, drawing near to a Conjunction near to the North Node, which produceth an eminent solar Eclipse, of which hereafter. Holy saith that the Opposition of Saturn and Mars significat quod homines in se invicem discordabunt & prosequenter mutuo odio, & cessabunt se familiariter invisere & deinde quilibet alteri: it significeth civil Discord, Neighbour against Neighbour, Province against Province, and shall prosecute one another with mutual Hatred and Malice, and shall cease from mutual Visits or friendly Correspondence, and shall vilify, scandalize, and abuse one another. This seems to intimate some Tumult or Rebellion in those Kingdoms and States under Aquary and Leo principally, viz. Turkey, Muscovy, part of Sweden, Westphalia, Piedmont, Hamborough, Brema, and Italy, Sicily, Bohemia, part of Turkey, Syracuse, Rome, Prague, Scotland seems to labour under the same Evils, and other Places under Taurus and Scorpio: According to the Signs they are in, and the other Aspects predominating, having Regard also to the Nature of the Season, they produce violent Effects. The Sun, Venus, and Mercury, all in the last Face of Scorpio, in Opposition to the Pleiades, which is accounted a foul and turbulent Part of the Zodiack, vehementissime significant, pluviam & tempestates; ob oppositionem Pleiadum. This is their natural Character in their own Nature, and being occupied by these Planets as before, and all of them in quartile Aspect to Saturn in a Sign and Degree not behind-hand with the other, Hyeme ventos magis solent; from this we may conclude, and for good reason expect a wet, windy, and turbulent Season, for a considerable part of November: For the rest take them as they occur in the Monthly Observations.

To conclude, It is probable this Year may prove a Year of Trouble and very great Mutations in Kingdoms and States: If the War breaks not out again, yet we may expect civil Disorders, especially concerning Religion and its Profession, wherein the Roman Religion seems to lose Ground, notwithstanding the

Per-

per-

Astrological Observations, 1699.

Persecution is so severe, upon the Professors of the reformed Religion. Indeed those rigorous Proceedings weaken the Hands of those Princes and States, who use those Methods of Conversion on their Innocent Subjects.

Strange Courage springs from Zeal and active Grace,

That can the worst of Tyrants Terror face.

Though Flames do threat to burn, and Floods to drown;

No greater Joy than in a Martyr's Crown.

I mean a wary Zeal not lost with Pride,

Nor perblind, but bath Knowledge for its Guide. I mean.

Of the Eclipses this Year 1699.

There will be two Eclipses of the Sun, and as many of the Moon.

The first of the Moon will be on the 5 of March, between 7 and 8 in the Night, visible to us; a further Account follows.

The second will be of the Sun, on the 21 of March, about 8, near 9 in the Forenoon, but a small Eclipse and scarce visible I conceive, therefore I have not bestowed the pains of Calculation.

The third is of the Moon, on the 30 of August, between 11 and 12 near Noon, therefore invisible as to us.

The last will be an Eclipse of the Sun, on the 13 Day of September, at 10 in the Forenoon, which I have calculated, and shall give you Account hereafter.

Of the Eclipse of the Moon March 5, 1699.

	D.	H.	M.	S.
Middle Time of the true Opposition	5	7	2	42
Longitude of the Sun	34	25	30	28
Eccentric Place of the Moon	112	45	30	28
Apparent Time		6	58	9
Parts deficient			23	8
Digits eclipsed		8	39	22
Total Duration		3	00	36
Beginning		5	33	58
Middle		7	4	16
End		8	34	34

I have received a Calculation of these two Eclipses from one Joseph Lombard of Wingham, in the County of Somerset, near Crookhorn, from new Tables of his own, titled *Astronomia Anglicana*, not yet published; so much I shall insert of both, as may fit the Observation of the curious.

The

Astrological Observations, 1699.

	H.	M.	
Beginning of the Eclipse at	5	31	} post meridiem.
Middle of the Eclipse at	6	57	
End of the Eclipse at	8	25	
Digits eclipsed	7	28	

This Eclipse begins in the Ascendent, the Middle is in the 12, and the End in the 11, the Middle and End may be seen if the Air be clear; the Sign wherein the Eclipse is celebrated, is an earthly Sign, and signifieth Scarcity and Prejudice to the Grain and Fruit, especially those sown and planted in the Spring. An Eclipse in the last Decanate or Face of *Virgo*, mortalibus morbos affert, it afflicts Mankind with many Diseases, and a Scarcity of Grain and Bread. Signs epidemical from that Cause, foggy and unwholesome Air, Consumptions and Diseases proceeding from Melancholy, Diseases and Death to great Cattle, and *Jupiter* is in quartile to the Defect, and stirs up Strife and Debate, and many tedious Law-Suits.

Of the Eclipse of the Sun.

The Sun will be eclipsed on *Wednesday* the 13 of *September*, before Noon, a Synopsis of the Calculation followeth.

	D.	H.	M.
Middle Time of the Conjunction Sept. 1699.	13	10	47 15.
Place of the Luminaries	22	00	29 57.
Apparent Time	13	10	50 40.
Parallax of Longit. of ☿ from ☉			37 53.
Visible Conjunction	13	9	40 32.
Digits eclipsed			10 36 47.
Total Duration			2 28 12.
Beginning of the Eclipse	13	8	14 1.
Middle or greatest Obscuration is at	13	9	40 32.
End of the Eclipse	13	10	42 13.
A Synopsis of <i>Lambert's</i> Calculation of this Eclipse.			
Apparent Time of the true Conjunction Sept. 13	10	29	0.
Place of the Luminaries		00	30 0.
Parallax of Longit. of ☿ from ☉			24 32.
Visible Conjunction	13	9	38 0.
Digits eclipsed		11	31 0.
Beginning of the Eclipse	13	8	29 0.
Middle or greatest Obscuration is at	13	9	36 0.
End of the Eclipse		10	45 0.

The

Astrological Observations, 2699.

The Beginning of the Eclipse is in the 12. House, near the Cusp, the Middle in the 11. and the End is in the Mid-heaven, not far from the Cusp of the 11th House. At the Middle of the Eclipse, Mars from the Cusp of 10, opposeth Saturn on the Cusp of the 4, and both emit their quartile Rays to the East and Western Angle, which in all Probability, may much aggravate and aggravate the Effects of the Eclipse, whatever Providence hath designed them to be. Authors say an Eclipse in an equinoctial Sign, it proves prejudicial to the Air and present Season.

When an Eclipse is in ♄ or ♅, there follows Controversies in Religion, and some Change or Alteration thereof: The greater the Defect is, the more considerable are the Effects. If we give Credit to the Ancients, Mars located in the tenth, and Lord of the East Angle, and in Opposition to Saturn, as I have before hinted, will produce very eminent martial or fiery Distempers upon the Bodies of Men, and other Disorders in the Air, too large here to insert for want of room. Mars is a fiery Planet, and in a fiery Sign, and seems to forward and aggravate the Effects of the Eclipse. An Eclipse in the first Decanate of Libra, corrupts the Air, begets the Plague, inclines young Men to Wantonness and Luxury, straitens Provisions, and makes them dear. I shall say no more of Eclipses.

A Table of the Hour and Minute of the seven Stars coming to the South, every 5th. Day of the Year.

• Seek

Astronomical Observations, 1698.

Seek the Month under the Title Months, and on the Head of the Table the Day of the Month, and in the Angle or meet-
ing you have the Hour and Minute of the Seven Stars Southing.
For example, *January 11*, they come to the South at 12 Min-
utes past 7, at Night. On the 1. of *April* they South at 7 Min-
utes past 8, Afternoon. And on the 26. of *December* they come to the
South at 20 Minutes past 8.

To find the Time of their rising, subtract 8 Hours 16 Min-
utes from the Time of their Southing, and the Remainder is
the Time of their rising; but if you add 8 Hours and 16 Min-
utes to the Time of their Southing, the Sum is the Time of
their setting.

If the Hours and Minutes of the Seven Stars Southing be less
than 8 Hours and 16 Minutes, so that Subtraction cannot be
made you must add 12 Hours to the Hours and Minutes of
their Southing, and then subtract the 8 Hours and 16 Min-
utes. If your Number exceed 12 after your Addition, you must sub-
tract 12.

The Table following sheweth the Southing of some other of
the fixed Stars, after the 7 Stars, with their semidiurnal Arch.
To find their rising and setting.

The Names of the Stars.	Time of Semidiur- Southing. nal Arch.			
	H.	M.	H.	M.
The middle Star of Orion's Belt	1	52	5	14
Aldebaran, South Eye of the Bull	0	50	7	27
Syrins, the great Dog-star	3	34		30
Procion, the lesser Dog star	3	54		32
The Head of Hydra	(A) 5	44		38
Cor Leonis, the Lions Heart	6	23		14
Spicæ virginis, the Virgin's Spike	9	40		11
Antares	10	33		08
South Ballance	11	54		40
North Ballance	11	32		5

To know when the great Dog star comes to the South on the
11th. of *November*, I look into the former Table, and find that
the seven Stars come to the South at 11 Hours 16 Minutes af-
ter Noon, I look into the Column of this Table entituled Time
of Southing, and against the great Dog-star I find 3 Hours 30

Astrological Observations, 1699.

Minutes, which added to 11 Hours 16 Minutes, makes
Hour 19 Min, subtracting 2 from 19 the Dog-Star comes to
South at 19 Minutes past 2 in the Morning. Now to know
the Time of the Dog-Star's rising, I find his Semidiurnal Arc
in the last Column: is 4 Hours 30 Minutes, which sub-
tracted from the Time of his southing, by adding 1
and the Remainder is 9 Hours, 49 Minutes, which is the
time of the great Dog-Star's rising, And adding 4 Hours 30 Mi-
nutes to the Time of his southing. It gives you 6 Hours 49 Mi-
nutes, which is the Time of the setting of that Star. I hope
these Rules will be easily understood by the Reader.

The Epilogue.

*Thus have I travell'd; my Journey's done,
I've finished my Work, long since begun:
The wheel of Time runs round incessantly,
But there's a Wheel in th' Wheel, few doth it see.
Men blinded by th' World, and Humane Pride,
The Thoughts of Providence are laid aside:
God's Work must still go on, and a Will be done,
Though things unsuited are under the Sun,
And Changes great; may Rome, &c. the Story tell,
Where they will fall. Kind Reader now farewell.*

Amerham, Bucks.

Aug. 8th. 1698.
